of unknown chemical agents. He recalled that ordinary cotton batting could be dipped in the chemicals in the tubes and then applied to surfaces of materials to determine in an unknown manner the chemical agents present. He was sure that the kit contained nothing for taking air samples. During a lecture,	4	
During a lecture, to as "Chemical O. P.". This "O. P." would be under the control of the division Chief of Chemical Services and, according to Dodge truck unit containing "all types of chemical testing equipment". With this equipment, air, soil, and equipment could be tested for the presence of chemical agents. The truck was to contain a cage for housing unknown types of birds and white mice in separate compartments. These birds and mice were to be utilized, in an un- explained manner, to detect the presence of nerve gases. During combat, the location of this truck would be "on the front lines". [gave no further information concerning this mobile defense chemical station, the way in which samplings were taken, or what types of and how many personnel made up the station. However, the truck was to be equipped with a gong and unknown colored rockets which were to be used in an unexplained manner as chemical warfare warning devices. [1] [2] [3] [4] [5] [6] [6] [7] [7] [8] [8] [8] [9] [9] [9] [9] [9		in the chemicals in the tubes and then applied to surfaces of materials to determine in an unknown manner the chemical agents present. to as "Chemical O. P.". This "O. P." would be under the control of the division Chief of Chemical Services and, according to was to consist of a covered 3/4-ton Dodge truck unit containing "all types of chemical testing equipment". With this equipment, air, soil, and equipment could be tested for the presence of chemical agents. The truck was to contain a cage for housing unknown types of birds and white mice in separate compartments. These birds and mice were to be utilized, in an unexplained manner, to detect the presence of nerve gases. During combat, the location of this truck would be "on the front lines". gave no further information concerning this mobile defense chemical station, the way in which samplings were taken, or what types of and how many personnel made up the station. However, the truck was to be equipped with a gong and unknown colored rockets which were to be used in an unexplained manner as chemical warfare warning devices. During the course of lectures, he also stated that in combat the individual soldier would be given some means of protection against unidentified chemical warfare agents. This protection would consist of an unidentified solution with which the soldier could inject himself to counteract "nerve gases". the solution would be injected intra-muscularly. did not indicate what these nerve gases were or how they would be detected and gave no further information concerning the nature or amount of the injections. During the lectures, displayed a green metal pump, about 45 cm high and 30 cm in diameter, which had a foot rest to steady it and an operating lever about 40 cm long. Some kind of indicator paper could be placed in the pump in such a way that the paper would change color in the presence of chemical agents. However, could give no further information concerning this apparatus, its function, or the basis of its issue.	50 50	nothing for taking air samples.
Unring the course of lectures, he also stated that in combat the individual soldier would be given some means of protection against unidentified chemical warfare agents. This protection would consist of an unidentified solution with which the soldier could inject himself to counteract "nerve gases". the solution would be injected intra-muscularly. did not indicate what these nerve gases were or how they would be detected and gave no further information concerning the nature or amount of the injections. During the lectures, displayed a green metal pump, about 45 cm high and 30 cm in diameter, which had a foot rest to steady it and an operating lever about 40 cm long. Some kind of indicator paper could be placed in the pump in such a way that the paper would change color in the presence of chemical agents. However, could give no further information concerning this apparatus, its function, or the basis of its issue. description of the gas mask which was issued to him was identical to that given in the Chemical Weapons and Equipment Manual, 1 June 1950, for the Shlem-1 helmettype gas mask except for a deviation in the inhaling and exhaling assembly. (See page 4	5(to as "Chemical O. P.". This "O. P." would be under the control of the division Chief of Chemical Services and, according to was to consist of a covered 3/4-ton Dodge truck unit containing "all types of chemical testing equipment". With this equipment, air, soil, and equipment could be tested for the presence of chemical agents. The truck was to contain a cage for housing unknown types of birds and white mice in separate compartments. These birds and mice were to be utilized, in an unexplained manner, to detect the presence of nerve gases. During combat, the location of this truck would be "on the front lines". [gave no further information concerning this mobile defense chemical station, the way in which samplings were taken, or what types of and how many personnel made up the station. However, the truck was
